

Health & Fitness Security Management

24-hour Online Access and Security

Reducing costs and increasing efficiency with 24-hour security management

Today, more than ever, health and fitness center owners are discovering the value of using access control to help them manage their facilities. From health clubs to wellness centers, the right access control system can reduce staffing costs (particularly at night), while delivering 24/7 access to valid clients.

Brivo Systems, with its award-winning access control and security management solutions, has partnered with Shape.Net to provide access control that is fully integrated with the Shape.Net member management platform. This enables club owners to efficiently offer their members safe, round-the-clock access to their health club facilities—without managing another system.

It's a powerful and easy way to reduce costs and provide members with better service. And you spend less time managing a database, and more time managing your club.

Unprecedented control and efficiency for health and fitness clubs

- Brivo's Software-as-a-Service security management allows administrators to control their system online—anytime, anywhere
- Owners can provide access to an unlimited number of agents/administrators to manage their own areas or the entire system
- Save time and money, while reducing the risk of data entry errors—no longer key in membership information into one system, only to have access to a different system and do it all again
- Email and text message notifications alert owners of system events such as propped doors or invalid access attempts
- View live or event-related online video for all access areas using your DVR or our affordable hosted video option, OVR WebService™

Benefits to Owners and Members

- **No unfettered access** – valid membership cards are used for access to the health facility
- **Card-fraud guard** – deters multiple card swipes that allow “freebies” into the facility. Non-members cannot access facility without proper credentials
- **Place of refuge** – implement securely managed access to locker/changing rooms by current paid membership and/or gender
- **User analysis** – collect data on membership usage for historic analysis—including names, dates, and times of entry
- **Resource control for access to specific areas** – differentiate access to areas such as swimming pools, daycares, and family rooms
